

Rear Film Screen

Rear Film Screen (RFS) is a rear type projection film which can be applied directly to glass or acrylic or any transparent materials. RFS film can cut to any shape, graphic, icon or logo to create unique promotional eye-catching screen. With transparent backing behind RFS screen it can be curved or moulded to create innovative screen solutions or application eg, circle, globes or wave effects.

RFS is made of light resolution, highly versatile, flexible and self-adhesive film which made of PET material able last more than 5 years. It is designed with 99% UV rejection and no colour discrepancy or fade out over time.

Applications:
